Termiticide Label Review Committee (TLRC) Annual Meeting Report

In December 2012, Dr. Terry Wagner retired from the USDA Forest Service, leaving the committee one member short. In July 2013, the TLRC was happy to welcome Dr. Vernard Lewis to the committee. Dr. Lewis is a Cooperative Extension Specialist at the University of California, Berkeley and will represent the scientific research community.

Since the annual meeting in August 2012, the TLRC submitted comments to the EPA, and respective pesticide registrants, in response to proposed label revisions, field data, and EUP protocols for 4 products from 4 registrants. All products were formulated with registered termiticide active ingredients. In addition, the TLRC met with a termiticide registrant in Atlanta, GA to discuss a revised label and supporting data. Lastly, the committee worked with a pesticide registrant to develop a protocol to gather data to satisfy the EPA's conditional registration of a new termiticide formulation and label.

The TLRC continues to be available to meet with pesticide registrants or other stakeholders at the annual/mid-year meetings, and can be available for conferencing. During this conference, the TLRC will meet with 1 registrant.
