Q5 Regarding the 2008 Reregistration Eligibility Decision (RED) mitigations for first generation anticoagulant rodenticides (FGARs) and second-generation anticoagulant rodenticides (SGARs), risk assessments indicate that wildlife incidents have not changed. With this information in mind, what further mitigation measures would you consider/recommend that may reduce exposure of wildlife to SGARs?

#	PLEASE EXPLAIN THE REASONS FOR YOUR RESPONSE TO THIS QUESTION.	DATE
1	unenforceable or vague label language	9/10/2020 2:42 PM
2	The label is typically not read by the person applying the product. They are "trained to use" (technicians going off the instruction of someone else rather than reading the label themselves/homeowners getting information from the internet professionals or DIY's) the product by someone else and that training may be out of date or wrong (homeowner/professional use). The label is present but people do what they are "trained" to do rather than what the label says.	8/21/2020 3:44 PM

4	Primarily homeowner use	8/12/2020 12:07 PM
5	Uses around farmsteads and as people build move out into the countryside, wildlife kills from eating dead or dying rodents	8/10/2020 1:24 PM
6	It is still extremely easy for a homeowner to access SGA via the internet. And, I have a concern that FGA, still available through the channels of trade are being misused by homeowners.	8/10/2020 10:28 AM
