nothing else different

Option 3:

Approach rodent
control differently

Option 4:

Not offer rodent
control

The Intended Right Answer (Option 3): Positives

Reduced rodenticide use

Better long-term prevention on the building

Fits into a larger IPM scheme on the property

The Intended Right Answer (Option 3): Drawbacks

Takes longer to Control Rodent infestation

Costs more \$\$\$ (to all people involved)

Preventative measures are more localized
to the building

Recycling Center – is there a way to drastically decrease the population without rodenticide?

Rodent control device used as a door stop

Neophobia (it's an unset trap it refuses to interact with)

So where does this leave us?
